Glowforge

Vimbai Ndlovu

"The Glowforge is a laser cutter that can engrave, cut, or etch on a variety of surfaces (wood, acrylic, glass, leather)," Mrs. Mielke says. This 3D laser printer was purchased this past summer through a grant, and is going to be used in her "U Design It" class, to help students design and create their own projects. Some of the projects it's going to be used for are holiday ornaments, notebook covers, Apple watch engraved bands, personalized rulers for young kids, and so much more! It also comes with cool features such as being able to cut cardboard so that possibly in the future, a lot of the packaging that comes to the school can be recycled and reused.
